 About

I'm motivated and **detail-oriented** Junior QA Engineer with a solid understanding of Cypress, Postman and JavaScript, seeking an opportunity to kickstart a successful career in Software Quality Assurance.

While I may lack industry experience, I'm **open to challenge and growth**, I have a **true passion** for testing and programming (I regularly visit testing-related meetups and contribute to Github). I'm a **quick learner** and aim to follow the best practices. I know how to find solutions, write scripts for **automated tests**, and use **testing methodologies**. I have a **high empathy** which is beneficial for understanding user behavior and scenarios.

Education:

Ufa State Petroleum Technical University: Bachelor of Engineering - Industrial and Civil construction

University of Minnesota: Introduction to Software Testing Course

Harvard University: Computer Science for Web Programming Course - *currently enrolled*

 Projects

[UITAP](#) is a collection of Cypress-powered tests for UI Test Automation Playground.

[di-dict](#) is a Python program for repetition of Dutch irregular verbs

[My-Age-in-Days](#) is a JS web app calculating how old you are in days.

[codewars-solved](#) is a collection of solutions for Codewars katas
